

Vertical Sliding Sash Windows

Care and Maintenance

General

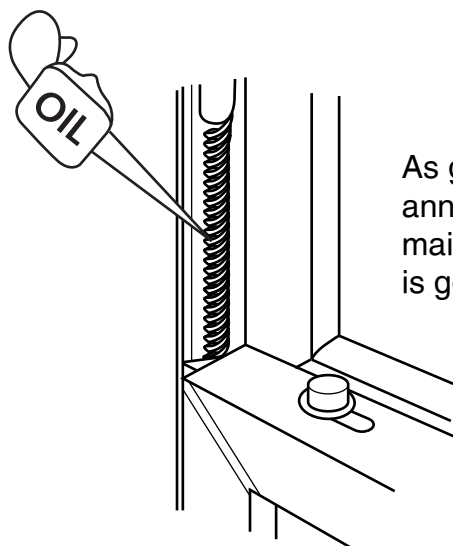

Periodically, wipe the frame and sill of **PVCu windows** with warm water and a mild detergent to remove any surface grime. Difficult stains may be removed using a gentle cream cleaner.

For **timber** or **aluminium windows** please refer to the care instructions from your installer.

Glass should be cleaned using a branded glass cleaner.

Balances

Depending upon location, cleaning and lubrication of the spiral rod may be desirable after a length of time, the period of which will vary according to site circumstances. A few drops of light oil (e.g. "3 in 1") applied to the spiral rod will always improve the operating action of a balance after long service.

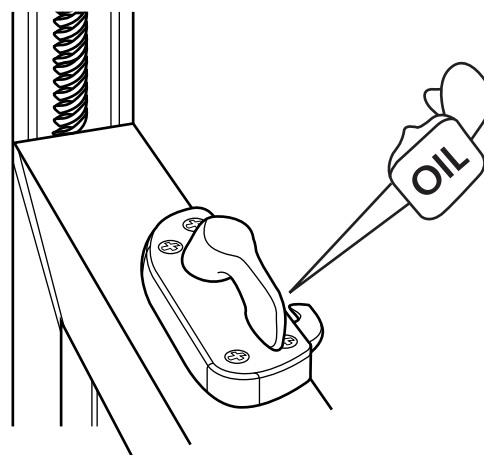

As guidance, annual maintenance is good practice.

Hardware

All hardware should be lightly lubricated twice a year (if applicable).

It is also advisable to apply grease to the Cam Locking claw arm, and the surface cleaned with a soft damp cloth to remove any dust or grime, taking care not to scratch the surface finish

If you need any help with the operation or maintenance of your new window or door please contact your installer.
